Abstract

Caused by a significant need for specialists in the field of health and biomedical Informatics, specialized curricula in health informatics, medical informatics, and biomedical informatics have been established in many countries in the world ([5], [6]).

For specialized educational programmes at universities, leading to a dedicated degree in health/medical informatics, there exist basically two different educational approaches ([1], [2]).

In this talk these approaches will be introduced and compared. Examples will be given. The last part of the talk will deal with graduates' job perspectives ([3], [4]).
